Confirm your default language

Last modified on 11/25/2026 2:24 pm EST

It's a small detail, but important: be sure your knowledge base's default language is set to the appropriate language in **KB settings > Basic**. This sets the `lang` attribute for the entire page in the underlying HTML, and AI tools use this to determine the language model they should use to assess your content.

Refer to Basic settings for more information on checking and changing this setting.
