Body Merge Codes

Last modified on 09/24/2026 10:59 am EDT

Here are the available template merge codes for use in **Customize > Style (HTML & CSS) > Custom HTML > Body**. All merge codes except "contents" will also work inside articles.

Template merge code	Description	Example
[template("**project-logo**")]	The image you uploaded under **Customize > Style (HTML & CSS) > Logo**. You can change the logo there or by replacing the original file in your **Files** page.	
[template("**project-name**")]	The knowledge base name from **KB settings > Basic**.	
[template("**contact**")]	A "Contact Us" link to your contact form if you have this feature enabled. Make changes to the form in **Customize > Contact form**. You can also customize your contact form link or add it to the table of contents.	
[template("**searchbar**")]	A search bar with placeholder text. You can Change your search bar placeholder.	
[template("**contents**")]	The contents of the current page whether that is the homepage, the contact form, or an article.	This merge code doesn't work within articles. If it did, it would create an infinite loop of loading content inside of content. It might be fun to see, but it would break KnowledgeOwl horribly.
[template("**is-editor-check**")]	Checks if the current viewer is an author. Returns a "true" value if the viewer is an author and a "false" value if they are not. Generally used for API snippets.	true

Template merge code	Description	Example
[template("**account-name**")]	Your company name, as set in **Account > Billing > Billing details > Company**. Used in the default footer copyright statement. To change what displays here, go to **Account > Billing > Billing details** and update the **Company** field rather than editing your HTML.	
[template("**current-year**")]	The current four-digit year. It updates automatically, so a copyright statement using it never goes out of date.
