Display categories open by default

Last Modified on 02/19/2025 2:03 pm EST

By default, the table of contents in your knowledge base displays all categories as closed or collapsed. Within individual categories, you can override this behavior using the **Table of Contents Display** setting. Refer to Customize category behavior in the table of contents for more information on these individual category overrides.

But you can also change this default behavior so that categories will default to being open by default instead. To do so:

1. Go to **Customize > Website**.
2. In the **Links and behavior** section, under **Table of contents behavior**, select **All categories open by default**:
3. Be sure to **Save** your changes.

All categories with the **Table of Contents Display** set to **Default** will now be display opened.

Refer to Website settings for more information on other settings available in **Customize > Website**.
