

Autosave

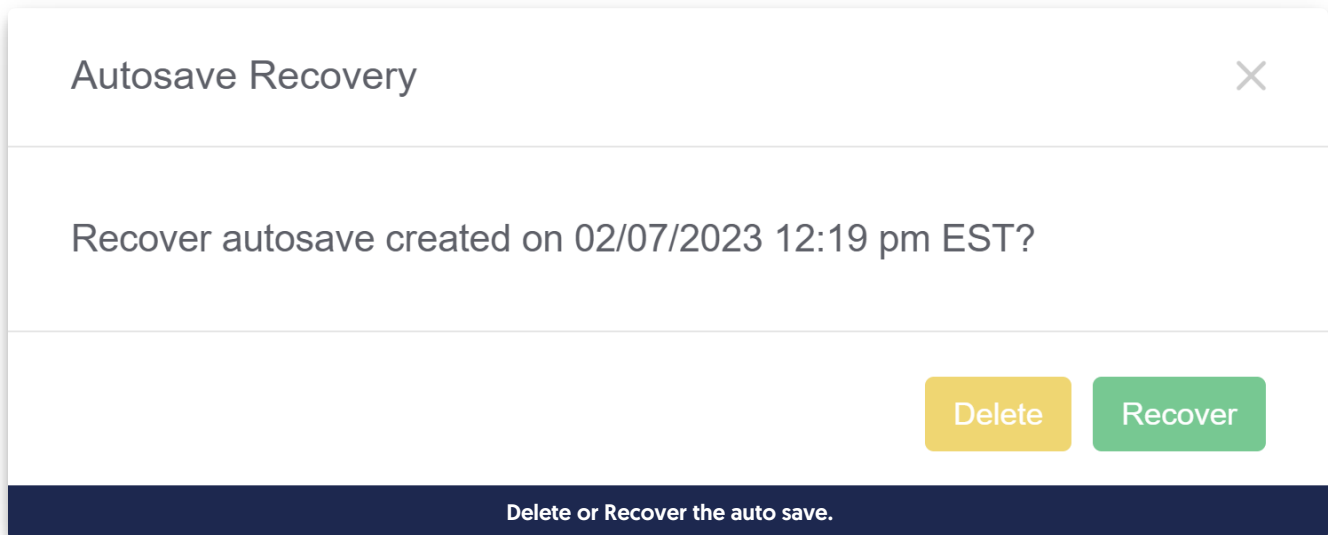

Last Modified on 12/05/2024 12:38 pm EST

When you edit a category or article, autosave creates a backup every 30 seconds.

If you leave without saving your changes, autosave will let you know the next time you come back to the category or article. You'll see a **Recover autosave** link just above the editor:

Click this link to open a pop-up where you can choose whether to delete or recover that autosave:

Once you've recovered the autosave, you'll still need to **Save** the article to permanently save those changes.
