

Adjust Line Spacing

Last Modified on 09/06/2019 2:18 am MDT

By default, the line spacing, or line-height CSS attribute, is set to 31 pixels for maximum web readability.

You can adjust the line-height of your text by pasting the following code into **Settings > Style > Custom CSS**:

```
.hg-article-body {  
  line-height: 25px;  
}
```

Note: Make sure to select the "Articles" Merge Code to target only the Articles with your CSS:

Custom CSS Custom HTML Custom <head>

Custom CSS

-- Select a Merge Code --

CSS Merge Codes

- Contact Pages
- Home Page
- Articles
- Categories
- Login Pages

-- Select a Merge Code --

Save

You can increase or decrease the pixels for the desired height, and this will apply to all text in your articles.
