

Choose your logo

Last Modified on 03/13/2025 2:03 pm EDT

All theme templates include space for a logo in the top navigation bar of your knowledge base.

Recommended logo size

The maximum ideal size for logos is 60px height and 300px width. Don't worry if your logo's larger than this--you can use CSS overrides to resize it.

To set a logo or update it:

1. Go to **Customize > Style (HTML & CSS)**.
2. In the left menu, select **Logo** to expand the section.
3. Select **Update Logo**. The **Change Logo** modal opens.
4. To add an image that's already in your knowledge base, browse the **Files Library** in the modal or search for the file's name. To add a new file for your logo, select **Upload New File** and follow the prompts to upload the file.
5. Once you've selected or uploaded the file you'd like to use, select **Update Logo**.
6. Be sure to **Save** your changes.

Your logo should display in your live knowledge base as soon as you save. If you aren't seeing it, the **Custom HTML for the Top Navigation** may have been edited to remove the logo. Refer to [Default Top Navigation HTML](#) to copy the HTML for the project-logo.
