Access the theme builder

Last Modified on 10/21/2025 3:07 pm EDT

To access our theme builder, go to **Customize > Style (HTML & CSS)**.

Style has lots of tools and options to customize the look and feel of your knowledge base. Use the built-in controls to change your colors, fonts, logo, favicon, table of contents behavior, or reset to our default theme without knowing HTML or CSS.

Our theme builder previews changes as you go so you don't need to save to see what new settings will look like. The preview allows you to toggle between the Homepage view, an Article view, the Contact Form view, and the Login Page view. You can also simulate viewing the site from a desktop/laptop, tablet, or phone to make sure your theme looks great on all size devices.

Authors also have access to Custom CSS, Custom HTML, and Custom Head at the bottom of the theme builder.
