

Keep glossary header visible when scrolling

Last Modified on 12/28/2022 12:25 pm EST

By default, when you view the Glossary, the title and the quick-links to each letter will disappear as you scroll the page.

If you have a lot of glossary terms and you're linking to your glossary in your table of contents or navigation, you may want to keep the Glossary header visible while scrolling.

To add this functionality to your knowledge base, you'll create a snippet to store the code and then add that snippet to the Custom HTML:

1. Go to **Library > Snippets**.
2. Click the **+ New Snippet** button.
3. Give your snippet a **Name** (Sticky glossary header, in our example).
4. Give your snippet a **Description**, like "Make the glossary header "sticky" so it's always visible as people scroll."
5. Click the dropdown next to **Snippet Content** to select **Code Editor**.
6. Copy the script below and paste it into the code editor.

```
<script>
$(function(){
  // Adjust the pathname listed below depending on your KB settings. It might be 'help/glossary', '/home/glossary' or '/'
  if(window.location.pathname == '/help/glossary') {
    if($('.ko-content-cntr').length > 0)
      var articleCont = $('.ko-content-cntr');
    else
      var articleCont = $('.documentation-article');
    var articleWidth = articleCont.width();
    var navTop = $('.hg-header').outerHeight(true);
    var topDiv = $('<div/>', {class: "ko-glossary-topdiv"});
    articleCont.prepend(topDiv);
    topDiv.append($('h1.page-header')).append($('div.glossary-jump-to'));
    var topOfJumpTo = topDiv.offset().top;
    var jumpToHeight = topDiv.outerHeight(true);
    topDiv.affix({
      offset: {
        top: topOfJumpTo - navTop,
      }
    });
  //add dynamic reusable styles
  $('<style>.ko-glossary-topdiv.affix{top:'+navTop+'px;width:'+articleWidth+'px;background:#fff;}.ko-glossary-top
  }
  });
</script>

<style>
/* Make sure that glossary header doesn't cover content when you jump to a letter */
.hg-glossary-page a:not([href]) {
  display: block;
  height: 200px;
  margin-top: -200px;
  visibility: hidden;
}
</style>
```

7. The code is used for knowledge bases with /help/ in their URLs. If you are using 'home' or 'docs' instead, you'll need to update the window.location.pathname in line 4 based on your knowledge base's settings to

'/home/glossary' or '/docs/glossary' .

8. Click the Create button in the upper right. Here's what a completed snippet might look like:

The screenshot shows the 'Snippets' management interface. The 'Snippet Name' is 'Sticky Glossary Header'. The 'Merge Code Name' is 'stickyGlossaryHeader' and the 'Merge Code Value' is '{{snippet.stickyGlossaryHeader}}'. The 'Snippet Description' is 'Make the Glossary header "sticky" so it's always visible when someone scrolls the Glossary.' The 'Snippet Content' is a JavaScript code block that dynamically adjusts the height of a glossary header to be sticky. The code includes comments and uses jQuery for DOM manipulation. The right sidebar shows visibility options like 'Hide from PDFs' and 'Restrict to Reader Groups' with 'None / Show to all readers' selected. A dark blue banner at the bottom of the screenshot reads 'Sample sticky glossary header snippet'.

9. Once it confirms your snippet is created, copy the Merge Code Value `{{snippet.stickyGlossaryHeader}}` in our example].
10. Go to **Settings > Style**.
11. Below the preview pane, click on **Custom HTML** and select **Body** from the dropdown.
12. Paste the snippet merge code value into the bottom of the window.
13. Click **Save**.

Custom CSS Custom HTML Custom <head>

Custom HTML [Body](#) ▾

```
<div class="row hg-site-body">
  [template("layout")]
</div>
<div class="row ko-site-footer text-center xsize">
  <div>Copyright © 2015 - <script type="text/javascript">
    document.write(new Date().getFullYear());
  </script> Knowledge Owl Cheese Mongery. All rights reserved.</div>
</div>

{{snippet.stickyGlossaryHeader}}
{{snippet.glossarySearch}}
```

Sample Custom Body HTML with snippet merge code added

Your glossary's header should now stay at the top regardless of how far down your readers scroll.
