# Hide Related Articles when there are none

Last modified on 07/16/2026 4:43 pm EDT

The Related Articles section will display regardless of how many articles are in it.

Some authors prefer to hide this section when it's empty.

To do so:

1. Go to **Customize > Style (HTML & CSS)**.
2. In the **Customize HTML, CSS, and JS** section, select **Custom HTML**.
3. Click on the **Custom HTML** tab.
4. Select **Article** from the **Select HTML section to edit** dropdown.
5. Copy the code below and paste it into the bottom of the Article Custom HTML pane:

```
<script>
 //If Related Articles section at bottom of the article has no related articles, hide the section
 $(function() {
   if( $('.ko-related-articles ul li:eq(0)').text().trim() == "None" )
     $('.ko-related-articles').hide();
 });
</script>
```

6. Be sure to **Save** your changes.
