

## Hide Related Articles when there are none

Last Modified on 10/29/2025 4:17 pm EDT

The Related Articles section will display regardless of how many articles are in it.

Some authors prefer to hide this section when it's empty.

## To do so:

- 1. Go to Customize > Style (HTML & CSS).
- 2. In the Customize HTML, CSS, and JS section, select Custom HTML.
- 3. Click on the Custom HTML tab.
- 4. Select Article from the Select HTML section to edit dropdown.
- 5. Copy the code below and paste it into the bottom of the Article Custom HTML pane:

```
<script>
//If Related Articles section at bottom of the article has no related articles, hide the section
$(function() {
   if( $('.ko-related-articles ul li:eq(0)').text().trim() == "None" )
      $('.ko-related-articles').hide();
});
</script>
```

6. Be sure to Save your changes.
