Feature Requests

- **POST to ticket form with 200 returned (Customer wanted to be able to post to our widget contact form and get a status 200 back instead of the current 300 redirect)**

Bug Fixes

- **Article links were breaking in API calls after we made them relative. We're back to returning the full URL for API calls.**
- **Date published was displaying the merge code in PDFs.**
- **Files names with spaces were getting spaces replaced with dashes due to a previous fix for file names. Reverted to allow for spaces.**
- **Videos in articles were breaking PDF downloads.**
- **Large HTML exports were failing.**
