

Automatically highlight definitions in articles

Last Modified on 12/12/2023 10:47 am EST

Once you have [set up glossary terms](#), you can automatically provide hover-over definitions for these terms in your articles. To turn on this option:

1. Go to **Settings > Basic**. (Or, on the Glossary page, click the **Edit in settings** link next to "Automatic article highlighting" to jump there!)
2. Scroll to the **Website Settings** section.
3. In **Glossary Terms**, check the box next to "For each glossary term that appears in an article..."

Website Settings

Navigation	<input checked="" type="checkbox"/> Enable breadcrumbs
Top navigation	<input type="checkbox"/> Add a reader login / logout link
Related Articles	<input checked="" type="checkbox"/> Automatically suggest related articles based off of the article titles <input type="checkbox"/> Backward suggest articles which list the current article as related <small>If both of these options are enabled, the reverse related articles will be ranked higher.</small>
Glossary Terms	<input checked="" type="checkbox"/> For each glossary term that appears in an article, automatically highlight the term 1 time(s)
Table of contents	<input checked="" type="radio"/> All categories closed by default <input type="radio"/> All categories open by default <small>Sub-categories are not affected by this setting. Can be overridden on a per category basis.</small> <input type="checkbox"/> Add a search bar to the top of the table of contents <input checked="" type="checkbox"/> Add a homepage link to the top of the table of contents <input checked="" type="checkbox"/> Add a glossary link to the top of the table of contents <input type="checkbox"/> Add a full PDF download link to the knowledge base table of contents — manage PDF
Content	<input type="checkbox"/> Disable conditional content in articles <input type="checkbox"/> Disable the default code syntax highlighter

Check the box next to Glossary Terms and use the numeric dropdown to set the number of highlights

4. Set the numeric dropdown at the end of that row to set the number of times you want each term to be automatically highlighted in each article. To prevent readers from being overwhelmed by tons of underlines, we limit you to 10 automatically highlighted terms per article. We will highlight terms starting from the top of the article and working down, so if you choose 3 here, we will highlight the first 3 appearances of each glossary term in the article.

5. Save your changes.

For automatic highlighting to work, the terms in the articles must exactly match the terms in the glossary. If your article contains variations of a term (such as abbreviations, plurals, etc.), you can [manually create a link to the glossary definition](#).

Auto-highlighting will not work on glossary terms within tables, divs (including the Well, Alert Danger, Alert Info, Alert Success, and Alert Warning divs), and embedded [topic articles](#). To highlight terms within tables, divs, or topic articles, [Add glossary definitions in articles manually](#).

See [Website Settings](#) for more information on other settings available in **Settings > Basic**.
