Last Modified on 12/28/2022 12:24 pm EST

## General updates

- New look and feel for the applications. Mainly new colors, icons, and buttons with a few UI/UX enhancements.
- Updated the new editor to the most recent version. This includes new icons.
- We replaced the new/legacy editor callout alert at the top of the editor with a less obstructive Switch Editor option.

We're also going to start calling the new editor the modern editor, as it's not that new anymore :)

## Bug Fixes

- The character counter in the bottom right of the area was overlapping content. Now it's not!
