

Display Microsoft Office OneDrive files in articles

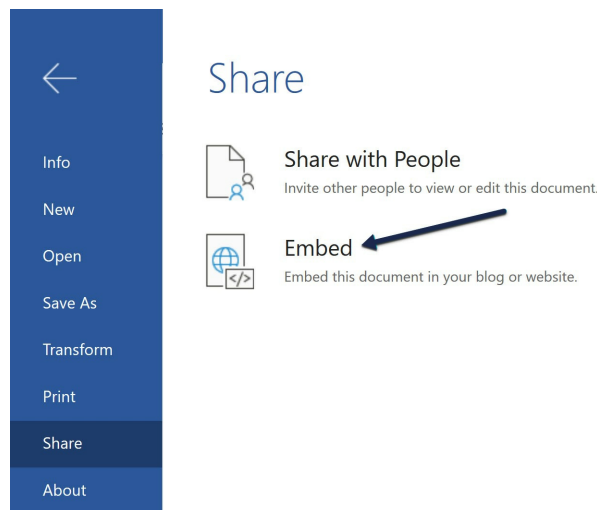

Last Modified on 07/12/2023 4:27 pm EDT

If you are using Microsoft Office Online (including Office 365), you can embed Microsoft Office files directly from your OneDrive account into KnowledgeOwl articles, without uploading those Office files to your knowledge base.

Embedding files is often easier for both authors and readers. Authors don't have to worry about file conversion or incompatible software, and readers can view the files without having to download them. It also guarantees that as soon as you make changes in OneDrive, your knowledge base readers will see the updated file contents.

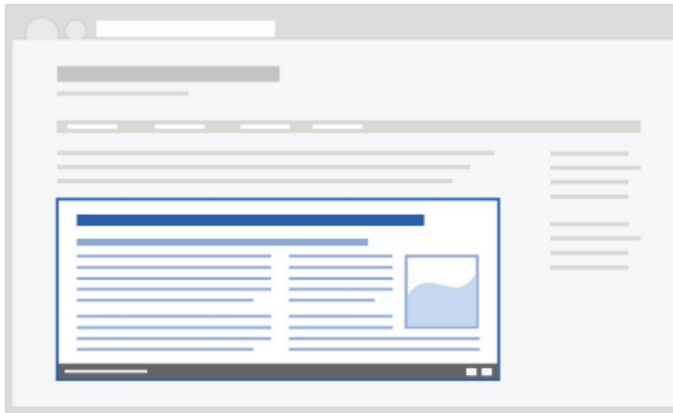

To embed a Microsoft Office file in OneDrive into an article using an iframe

1. Open the OneDrive file you'd like to embed in your article.
2. Go to **File > Share**.
3. Select **Embed**.

4. This will prompt you to **Generate** the embed code (your screen may look slightly different depending on which Office product you're using). Click the **Generate** button.

Embed " [redacted] " in a blog or webpage

Generate HTML code to embed this file

Generate

Note: Anyone who visits the blog or webpage with this embedded file will be able to view it without signing in.

Done

5. This will open a pop-up where you can configure your embed code. The options here will vary based on the Office file type [e.g. Powerpoint options are different from Word]. For documents and spreadsheets, we recommend using something in the 600px-800px range for your height.

A screenshot of the Microsoft Word embed code configuration screen. The window is titled 'Embed' and has a close button (X) in the top right corner. It is divided into three main sections: 'Preview', 'Dimensions', and 'Embed Code'. The 'Preview' section shows the Microsoft Word logo and the Microsoft logo. The 'Dimensions' section has input fields for 'Width (px)' set to 476 and 'Height (px)' set to 700. The 'Interaction' section has three checkboxes: 'Let people print the document' (unchecked), 'Let people see the embed code for this document' (unchecked), and 'Start on page:' with an empty input field. The 'Embed Code' section contains a text area with the following code:

```
<iframe src="https://onedrive.live.com/embed?cid=4D6940703CB8E6CE&amp;resid=4D6940703CB8E6CE%21463&amp;authkey=AOnGalT6558T9x88&em=2&amp;wdStartOn=1&amp;wdEmbedCode=0&amp;wdPrint=0" width="476px" height="700px" frameborder="0">This is an embedded <a target="_blank" href="https://office.com">Microsoft Office</a> document, powered by <a
```

 Below the code is a 'Copy this text and paste it in your site or blog' button. A 'Close' button is in the bottom right corner. A dark blue banner at the bottom of the window reads 'Sample Word embed code configuration screen'.

6. Once you're finished changing the settings, copy the code in the Embed Code box.
7. In your article in KnowledgeOwl, click on Code View [Source] in the WYSIWYG editor to get to the HTML and paste that embed code in.
8. Save your article.

Here's a PowerPoint presentation embedded from OneDrive:
