Add ratings to all articles

Last modified on 07/16/2026 4:43 pm EDT

By default, the rating merge code is added to the HTML of all articles.

If you've removed this merge code and want to readd it:

1. Go to **Customize > Style (Custom HTML & CSS)**. The **Style Settings** page opens.
2. In the **Customize HTML, CSS, and JS** section, select **Custom HTML**.
3. Select **Article** from the **Select HTML section to edit** dropdown.
4. Copy the merge code below and paste it in wherever you'd like the ratings to appear. (Refer to Default Article HTML to see our default placement directly above the comments template, but put it wherever you'd like.)

   ```
   [template("rating")]
   ```

5. Be sure to **Save** your changes.

The merge code automatically displays a title and the rating system you've selected (either the thumbs up/thumbs down or the stars).

To edit the title displayed, head to **Customize > Default text > Article** and update the **Article star rating label** (if using stars) or **Article thumb rating label** (if using thumbs). Refer to Customize Article text guide for more detailed instructions.
