Hide Related Articles section from a specific article

Last modified on 07/16/2026 4:44 pm EDT

If you're using Related Articles, there might be specific articles where you don't want the section to display. For example, perhaps this article contains your company W9 and everything it's suggesting as related is product documentation.

For this scenario, create a snippet that will hide the Related Articles section and then add that snippet to the specific articles where you want to hide the section.

First, create the snippet:

1. In the left navigation, go to **Snippets**. The **Snippets** page opens.
2. Select **+ Create New Snippet**.
3. Enter a **Snippet Name**, like "Hide Related Articles."
4. Enter a **Snippet Description**, like "Use this snippet in articles and custom content categories to hide the Related Articles section."
5. Select the **Snippet Content** dropdown to switch to **Code Editor**:

   Your browser does not support HTML5 video.

6. Copy the code below and paste it into the snippet's Code Editor:

```
<style>
 /* Hide related articles */
 .ko-related-articles {
   display:none;
 }
</style>
```

7. Select **Create**.

Now that your snippet exists, any of your authors can add it to an article using the Insert snippet option.
