Available webhook events

Last Modified on 08/29/2024 10:54 am EDT

Here are the webhook events KnowledgeOwl can fire on:

Article Events

- **article.create - fires once per article, when an article is created**
- **article.update - fires each time an article is saved with changes**
- **article.updatedCallout - fires each time an article is saved with the Updated callout**
  - Note: This webhook will only fire if the article previously had a No Status callout.
- **article.newCallout - fires each time an article is saved with the New callout**
  - Note: This webhook will only fire if the article previously had a No Status callout.
- **article.publish - fires when an article is published**
- **article.archive - fires when an article is saved with an Archived status**
- **article.delete - fires when an article is saved with a Deleted status**
- **article.statusChange - fires any time an article is saved with a publishing status change**

Comment Events

- **comment.create - fires once per comment, when a comment is created**
- **comment.delete - fires when a comment is deleted**
- **comment.update - fires when a comment is updated**
- **comment.statusChange - fires any time a comment's status changes**

Contact Form Events

- **contactForm.submit - fires when a contact form submission occurs**

> **Don't see what you need?**
> If you have an event that you'd like to receive notifications on that's not listed above, contact us to let us know!
