

Use your own SMTP provider for reader emails

Last Modified on 09/26/2023 1:02 pm EDT

You can now set up your reader welcome emails and reader password reset emails to be sent through [your own](#) or a [third-party SMTP provider](#).

This can be especially helpful if you've had any issues with reader welcome emails or reader password reset emails getting flagged as spam or a firewall has prevented their delivery outright.

If you've already customized the from name or reply to address for reader welcome or reader password reset emails, [those values will still be used](#); if you haven't changed those, the SMTP values will serve as a default.
