Widget 2.0 + Snippet merge codes in titles

Last Modified on 12/28/2022 12:24 pm EST

We released a small but important bug fix to Widget 2.0. Previously, if you had articles or categories with a snippet merge code in the title, Widget 2.0 was displaying the merge code itself. So if you had an article with something like "{{productName}} installation instructions", that's exactly what would show in Widget 2.0.

Now, Widget 2.0 properly replaces the snippet's merge code with the text the snippet contains, so your article would properly say "KnowledgeOwl installation instructions", for example.

These updates include security patches.
