Bug fix for default categories with inline article display

Last Modified on 12/28/2022 12:24 pm EST

This bug fix impacts this scenario:

- **Default category type**
- **Subcategory display type: Content List**
- **Article Display Options: Inline**
- **Where articles in the category are configured as URL Redirect articles**

In this scenario, all URL redirect articles were being opened in the same tab, even if the URL Redirect was set to open in a new tab.

With this fix, the above category options properly respect the new tab/same tab setting for URL redirect articles.
