New article list: Reader's Recently Viewed Articles

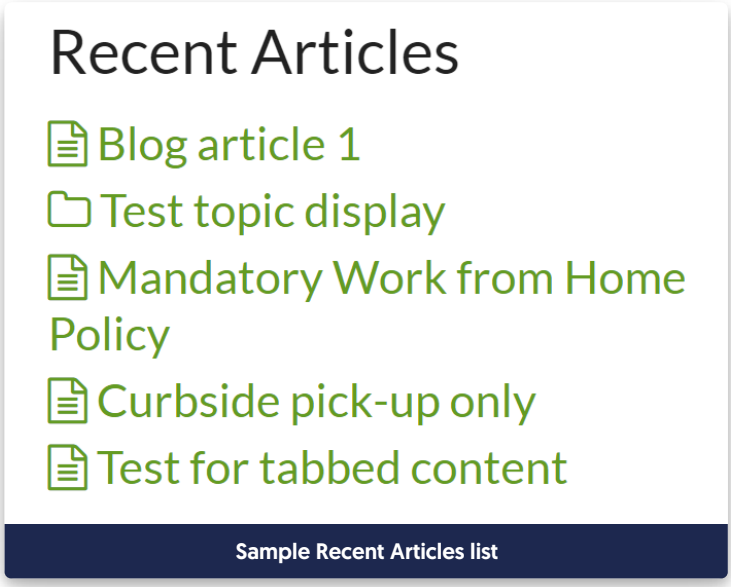

Last modified on 09/25/2026 2:39 pm EDT

By default, we include three pre-built article lists in our knowledge bases:

- Popular Articles list
- Newest Articles list
- Updated Articles list

We're pleased to announce the release of a new article list: the reader's Recent Articles list!

Add this article list to your homepage, Article HTML, Right Column HTML, or into a snippet into individual articles or categories to display a logged-in reader's five most recently viewed articles, topic display categories, and custom content categories.

This can be a great way for readers to have quick access to recently-accessed content.

Note: this article list only works with individual reader accounts. Public knowledge bases, shared passwords, or shared IP addresses will not populate this list.

For more information and to get the article list set up in your knowledge base, refer to Recent Articles list.
