New KB widget: Reader's Recently Viewed Articles

Last Modified on 12/28/2022 12:24 pm EST

By default, we include three pre-built article widgets in our knowledge bases:

- **Popular Articles Widget**
- **Newest Articles Widget**
- **Updated Articles Widget**

We're pleased to announce the release of a new widget: the reader's Recent Articles Widget!

Add this widget to your homepage, Articles HTML, Right Column HTML, or into a snippet into individual articles or categories to display a logged-in reader's five most recently viewed articles, topic display categories, and custom content categories.

Recent Articles

📄 Blog article 1
📁 Test topic display
📄 Mandatory Work from Home Policy
📄 Curbside pick-up only
📄 Test for tabbed content

Sample Recent Articles widget

This can be a great way for readers to have quick access to recently-accessed content.

> **Note:** this widget only works with individual reader accounts. Public knowledge bases, shared passwords, or shared IP addresses will not populate this widget.

For more information and to get the widget set up in your knowledge base, see **Recent Articles Widget**.
