

# SSO/SAML IdP URL bug fix: URL trim

Last Modified on 12/28/2022 12:24 pm EST

We fixed a small bug that was impacting some new SSO/SAML setups. Previously, we were using the full URL entered for SAML IdP URLs. If you had a trailing space on the end, those URLs would break the SAML configuration.

This was mainly an initial hiccup for customers setting up [SSO/SAML](#) for the first time, but we wanted to streamline that experience.

On **Settings > Security**, we've updated these IdP URL fields to ensure they trim any trailing spaces:

- IdP entityID
- IdP Login URL
- IdP Logout URL
