

Add page numbers to PDFs

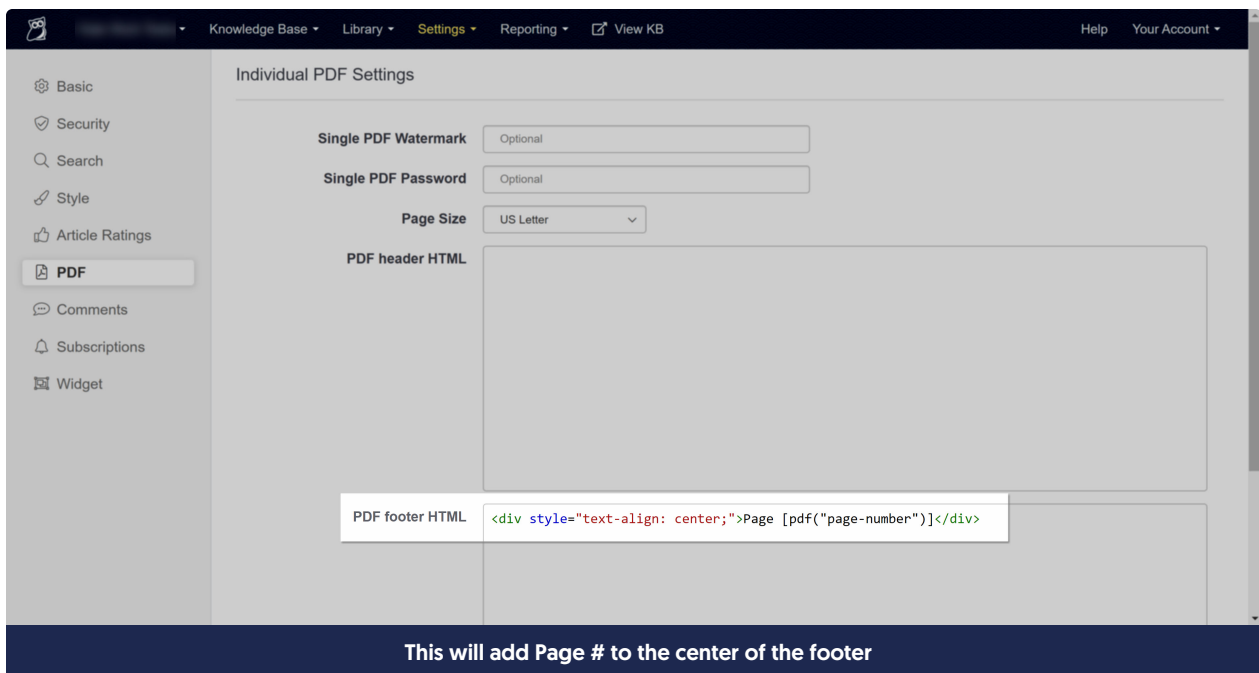

Last Modified on 12/28/2022 12:25 pm EST

You can add page numbers to the header or footer of all PDF exports in KnowledgeOwl, though the exact setup varies a bit based on the type of PDF. All methods use this merge code: `[pdf("page-number")]`

Individual article PDFs

To add page numbers to your individual article PDFs:

1. Go to **Settings > PDF**.
2. Add PDF Header HTML or PDF Footer HTML that includes the `[pdf("page-number")]` merge code. Here, I've added a centered div that will create "Page [number]":

The screenshot shows the 'Individual PDF Settings' page in KnowledgeOwl. The left sidebar has 'PDF' selected. The main content area has the following settings:

- Single PDF Watermark: Optional
- Single PDF Password: Optional
- Page Size: US Letter
- PDF header HTML: (empty)
- PDF footer HTML: `<div style="text-align: center;">Page [pdf("page-number")]</div>`

A blue banner at the bottom of the screenshot reads: "This will add Page # to the center of the footer"

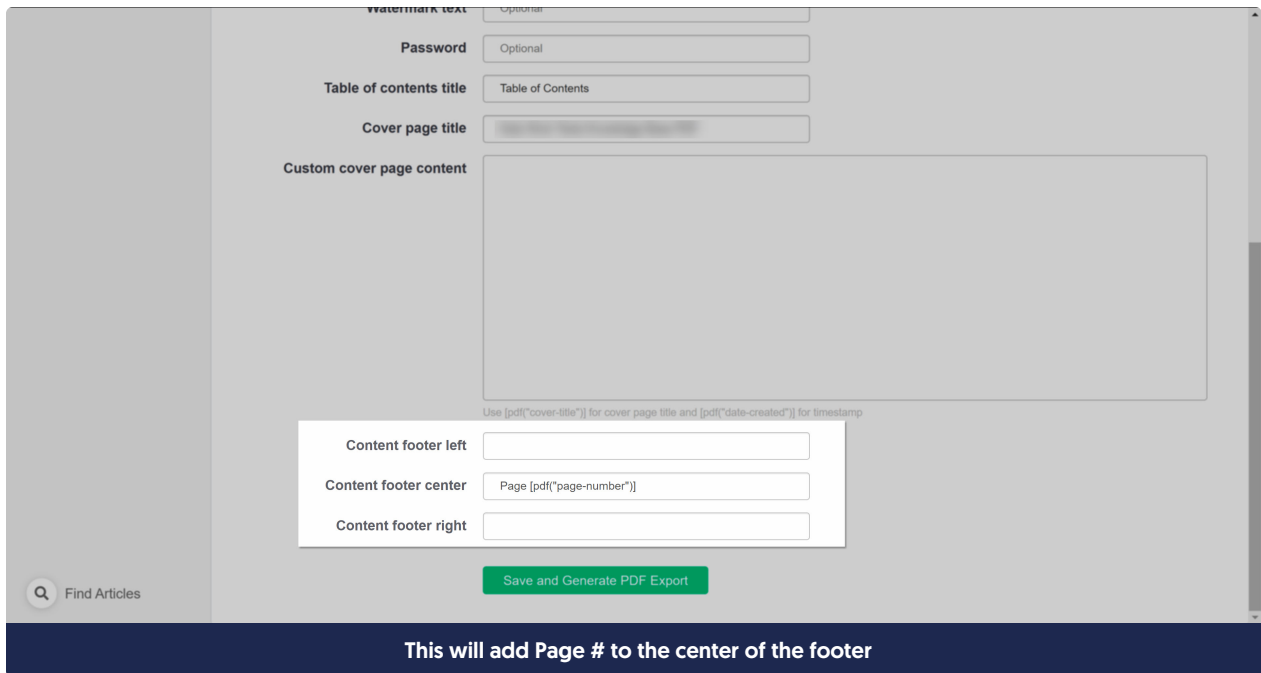

3. Be sure to **Save your changes**.

Standard & Custom PDF exports

For both the Standard and Custom PDF exports, you don't need to add full HTML. You can just add the page number merge code directly to the relevant field:

1. Go to **Knowledge Base > Exports**.

2. Click on **Standard PDF** to edit the full knowledge base standard PDF, or **Custom PDFs** and then the gear icon next to the custom PDF you'd like to add page numbers to.
3. Add the `[pdf("page-number")]` merge code into the Content footer left, center, or right, depending on where you'd like it. Here, we've added it to the center to get the same treatment as in the individual PDFs above:

The screenshot shows a configuration interface for a PDF export. It includes several input fields: 'watermark text' (Optional), 'Password' (Optional), 'Table of contents title' (Table of Contents), and 'Cover page title'. A large text area is labeled 'Custom cover page content'. Below this, there are three footer configuration options: 'Content footer left', 'Content footer center', and 'Content footer right'. The 'Content footer center' field contains the code `Page [pdf("page-number")]`. A green button labeled 'Save and Generate PDF Export' is at the bottom. A search bar with a magnifying glass icon and the text 'Find Articles' is in the bottom left. A dark blue banner at the bottom of the interface contains the text: 'This will add Page # to the center of the footer'.

4. Be sure to **Save and generate your PDF export.**
