Add or remove the glossary page from your search results

Last Modified on 09/16/2025 8:24 pm EDT

You can control whether your Glossary page shows up in search results when someone searches the word "glossary". When turned on, if a reader searches for the word "glossary" (or whatever name you've renamed your glossary to!), a link to the Glossary displays in a box at the top of your search results:

> **Sample glossary page search result**

> **Not for use in the Contextual Help Widget**
> Unlike displaying glossary term definitions in search results, this box won't display in Contextual Help Widget search results.

To turn on this setting:

1. Go to **KB settings > Glossary**. The **Glossary settings** page opens.

2. In the **Display options** section, check the **Search** box to **Display a link to your glossary page when a reader searches for the word "glossary"**.

3. Be sure to **Save** your settings.

> **Make it your own**
> Want to change the look and feel of that callout box? Follow the steps in Style the glossary snippet search results to get what you want. Don't like the word "Glossary" or want to add more explanation to the box? Use the Search section of Customize Default text to change the text that appears there!
