

Nat'l No Housework Day bug fixes ☒

Last Modified on 01/11/2024 1:32 pm EST

Does anyone else think it is **not** a coincidence that World Health Day happens to fall on the same day as National No Housework Day? ☒

At any rate, we have been busy with some longer/larger projects, so our release notes have been a bit quiet lately.

But here are a few changes rolled out today:

- **More/better reader search options in Your Account > Readers:** The [search box](#) in Readers now supports:
 - Full email search (previously the @ symbol was breaking things)
 - Smarter handling of spaces: If you type a name with a space into search such as "Linus Owl", search will interpret this as "FirstName LastName" and pull up reader records that match.
 - Reader ID: For those of you who use the API or know reader IDs based on exports or URLs, you can now search using the reader's ID number!
- **Fewer security token requests on app login page:** When we rolled out our updated [Updates to app login + password reset processes](#) in 2020, we created a few situations that would trigger security tokens email verification. Since then, we've learned that some authors were having security tokens triggered/required nearly every time they logged in. So we've dialed down the requirements here a bit so you should really only be asked for a security token if you've done something to trigger it (like entering a repeated incorrect password).

For the handful of authors who were impacted by this issue: thank you for your patience while we found a solution that still maintains a solid compromise between usability and security!

- **Glossary definitions support opening hyperlinks in new tab:** Glossary term definitions containing hyperlinks can now include `target="_blank"` in the hyperlink HTML. We used to support this before we [stopped allowing some special characters](#) in definitions, and by popular demand we've added it back.
