

# Manage Articles: Now with a Category Filter!

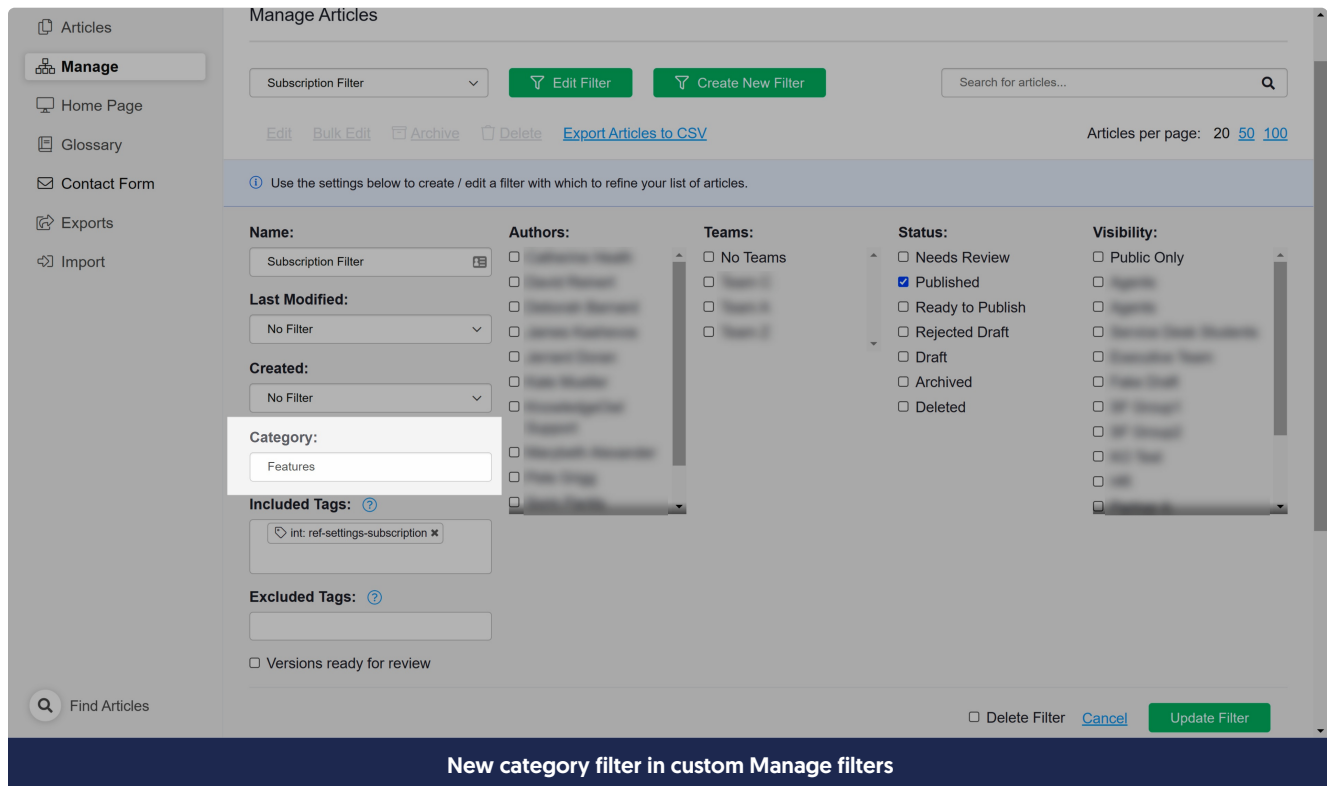

Last Modified on 12/28/2022 12:24 pm EST

We're happy to announce an awesome new filter option in [Manage Articles](#): the option to filter by **category**.

When you [create](#) or [edit a custom filter](#) in Manage Articles, you now have an option to show only articles in one category.

## Where is it?

The new filter appears between the Created date and [Included Tags](#) filters:

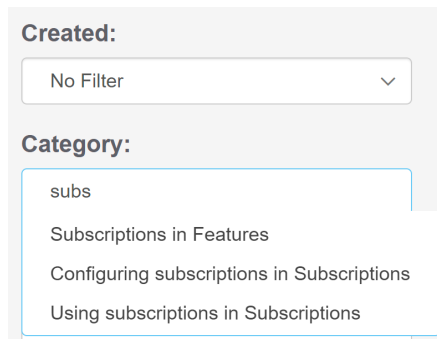

The screenshot shows the 'Manage Articles' interface. On the left is a sidebar with navigation options: Articles, Manage (selected), Home Page, Glossary, Contact Form, Exports, and Import. The main content area is titled 'Manage Articles' and includes a search bar, 'Edit Filter' and 'Create New Filter' buttons, and a search input. Below this are filter settings for Name, Last Modified, Created, Authors, Teams, Status, and Visibility. A 'Category' filter is highlighted with a white box, showing 'Features' selected. Below the Category filter are 'Included Tags' and 'Excluded Tags' sections. At the bottom right, there are 'Delete Filter', 'Cancel', and 'Update Filter' buttons. A dark blue banner at the bottom of the screenshot reads 'New category filter in custom Manage filters'.

## How it works

Here's how it works:

- You can add a single category to the filter.

- The field is a typeahead look-up that will display matching category titles below the field as you type.
- The dropdown match list will display the category name only if it's a top-level category.
- The dropdown match list will display the immediate parent category for any subcategories. In the screenshot below, I've typed "subs" and I have three options; Subscriptions is a subcategory of Features, and the other two are subcategories of Subscriptions:

- The filter will return all articles directly in the category, as well as all articles within that category's subcategories.

So, for example, if I have a category structure like:

- **Top-Owl Category**
  - Barn Owls
  - Great Horned Owls
  - KnowledgeOwls
    - Human Owls
    - Linus & Friends

If I use **KnowledgeOwls** as my category filter, I'll get articles within three categories:

- the KnowledgeOwls category itself
- the Human Owls subcategory
- the Linus & Friends subcategory

If I use **Top-Owl Category** as my category filter, I'll get articles within six categories:

- the Top-Owl Category itself
- the Barn Owls subcategory
- the Great Horned Owls subcategory
- the KnowledgeOwls subcategory
  - the Human Owls subcategory
  - the Linus & Friends subcategory

We hope this new category filter makes it easier to use **Manage Articles** to perform content audits and [bulk edit content](#). Let us know what you think!
