Copy existing snippet

Last modified on 11/18/2026 12:34 pm EST

What if you want to test out some tweaks to an existing snippet? Instead of trying to copy the whole thing yourself, copy your existing snippet!

To copy an existing snippet:

1. In the left navigation, select **Snippets**. The **Snippets** page opens.
2. Find the snippet you want to use as a starting point. You may need to search.
3. Select the gear cog icon in the upper right of the snippet's card.
4. Select **Copy**:

5. A confirmation modal opens. Make sure the name of the snippet you're copying is the one you meant to select. Then select **OK**.

Snippets need to have unique unique merge code names, so we'll automatically add "Copy" to the new snippet, but you can edit the name and merge code to whatever makes sense to you.
