Look & feel

Last Modified on 07/10/2024 4:36 pm EDT

There are a number of ways you can adjust your knowledge base's look and feel so that it "fits" you. Most of these changes can be found in one of four places:

Settings > Basic

The **Settings > Basic** page controls a lot of knowledge base-wide settings, including:

- **Time zone**
- **Date/time format**
- **Default language**
- **Links and default behavior in your table of contents**
- **New/updated callout duration**

Style Settings controls

The easiest look and feel changes can be made using the controls in the lefthand menu of the **Settings > Style** page.

Here, you can:

- Change your **color palette**
- Change your **fonts**
- Add a **logo image** or icon
- Change the **theme**
- Change the **layout**

See **Setting your overall theme** for more information.

Homepage

We provide a template layout for your homepage that pulls your top-level categories and creates some automatic **article lists**. You can add your own custom content into your homepage by going to **Homepage** in the upper left navigation. (More changes can be made in **Settings > Style** in the **Custom HTML** for the **Homepage**).

For more information on working with this page, see **Homepage look and feel**.

Style Settings customizations

The **Settings > Style** page also offers two sections where you can get a lot more detailed in your customizations:

- **The Custom CSS section allows you to add CSS styles to style your knowledge base**
- **The Custom HTML templates let you change the template layouts we use to generate pages in your knowledge base.**

We provide examples of common Custom CSS and Custom HTML tweaks in the **Look and feel** subcategories, so if you've never worked with CSS before, don't be afraid! Take a look through some of the customizations and see what would be a good fit for you.
