

# Additional content options

Last Modified on 04/28/2026 12:39 pm EDT

The URL checker checks all articles with either a Published or Needs Review [publishing status](#).

Use the checkboxes in the **Additional content options** section to include additional content.

## The Additional content options section

Choose from these options:

- **Scan draft articles:** Use this option to include articles with any of the three draft publishing statuses (Draft, Ready to Publish, and Rejected Draft) in the report.
- **Scan archived articles:** Use this option to include articles with the Archived publishing status in the report.
- **Scan article versions:** Use this option to include inactive versions of articles with the designated statuses in the report. This will include previously active versions as well as never-activated versions. Refer to [Versions](#) for more information on working with versions and version activation.
