

Updates to Broken Links Report

Last Modified on 07/12/2023 2:58 pm EDT

Thanks to feedback from our Wisdom Wednesday and customers reaching out directly, we've made a few tweaks to the [Broken link checker & report](#):

- We added a new Link Type column that identifies if the link is Internal or External to KnowledgeOwl, which should make filtering the report a bit faster. See [Generating a Broken Links Report](#) for more info.
- We added an Author and Last Modified Author column to display the author available for each, when the object supports this kind of tracking. See [Generating a Broken Links Report](#) for more info.
- For [custom author roles](#), we broke out the ability to Run Broken Links Report into a separate Tools Permission section. See [Available custom role permissions](#) for more info.
- We've updated a couple of the column headings so that they match column headings we use in **Manage**

If there are other changes you'd like to see us make--such as options to exclude additional "noisy" codes or certain types of links--please let us know!
