KB Merge Codes

Last modified on 09/07/2026 4:17 pm EDT

Here are the available template merge codes in the KB merge codes list, which you can use in any of the **Customize > Style (HTML & CSS) > Custom HTML** templates. Many can also be used directly within individual articles, categories, and subcategories.

Template merge code	Description	Example
[template("**article-tags**")]	Creates a Tags: [hyperlinked tags] list for an article or category wherever it's used. Change the "Tags:" text in **Customize > Default text**.	Tags: searchsubscription
[template("**article-tag-names**")]	Creates a comma-separated list of the article tag names associated with a given article or category.	tag1,tag2,tag3,search,subscription
[template("**project-logo**")]	Inserts the knowledge base logo set in **Customize > Style (HTML & CSS) > Logo**. Used in the Default Top Navigation HTML	
[template("**project-name**")]	Inserts the knowledge base's name, as set in **KB settings > Basic**. Used in the Default Top Navigation HTML.	
[template("**contact**")]	Adds the link to Contact Form. Should be added somewhere in your knowledge base if you're using the Contact Form.	
[template("**glossary**")]	Creates a link to the Glossary page.	
[template("**account-name**")]	Inserts your company name, as set in **Account > Billing > Billing details > Company**. Used in the default footer copyright statement.	
[template("**current-year**")]	Inserts the current four-digit year. It updates automatically, so a copyright statement using it never goes out of date.
