

# Nat'l Fro Yo Day ☒ bugfixes

Last Modified on 03/27/2024 12:12 pm EDT

Our northeastern U.S. and southeastern Canadian owls will probably opt out of this holiday, but for everyone else: today is National Frozen Yogurt Day, so if you needed an excuse to go get fro-yo, you're welcome. ☒

Over the weekend, we released fixes for these bugs:

- [Article Favorites](#) were not allowing readers to favorite articles that had [reader group restrictions](#). We've fixed this so you can now favorite restricted content! ☒
- [File references](#) will now check [Settings > Style > Custom CSS](#) for files. These references will display in the Theme References section. You will need to resave [Settings > Style](#) to see the reference update.
- Also in [file references](#), if you were using [our instructions to use redocly to embed API documentation](#) in your knowledge base, the yml file reference for the spec-url was not being tracked as a reference. It is now, though you'll need to resave your snippet for it to show up.
- An unintended consequence of our new [Customize Text tool](#): if you were using the [article-tags template](#) in your article HTML, newly-created [Individual article PDFs](#) were showing a customize text merge code instead of the Tags: text. We've updated the PDFs so they properly pull in the Tags: label that can be set in [Tools > Customize Text > Search](#). Sorry for the oversight!
- If you set up a [private domain](#) for your knowledge base and had a link that was using an alternate root path (say, /docs when your knowledge base is currently set to use /help), that path was previously throwing an ERR\_TOO\_MANY\_REDIRECTS error. Now, it throws a 404 page like other bad paths do.
- If you changed the order of [Reader Groups](#), that order change was not being displayed everywhere. We've updated it so that it is. You should now see the correct order everywhere reader groups are displayed, including the [snippet editor](#), the [category editor](#), [Manage Articles](#) (create/edit filter checkboxes), [Your Account > Readers > Create Filter](#).

Also, thank you all for your patience during our scheduled maintenance on Friday/Saturday. We were able to complete a required infrastructure upgrade with minimal disruption to our customers! ☒
