

Styling PDFs

Last Modified on 01/11/2025 12:57 pm EST

PDFs inherit the styles of your knowledge base.

If you need to customize styles in PDFs differently from your knowledge base (such as web fonts that don't generate in PDFs well), add custom CSS that's prefaced with the `.hg-pdf` class.

For [individual article PDFs](#), add overall layout/style changes in **Customize > PDF**. For [Standard](#) and [Custom PDF exports](#), add overall layout/style changes in **Tools > Exports** in the appropriate PDF.
