

Customize Text: Article Lists

Last Modified on 07/17/2024 12:21 pm EDT

We're continuing to plug away at adding more sections to the Customize Text tool. This week's addition: all of our Article Lists!

By default, all knowledge bases come with three article lists on the homepage:

- [Popular Articles List](#)
- [New Articles List](#)
- [Updated Articles List](#)

You can also optionally add two other article lists:

- [Recent Articles List](#)
- [Article Favorites List](#)

You can now customize things like:

- The "See more..." link at the bottom of article lists
- The "None" text displayed when a list has no relevant articles to display
- The page titles for the New Articles, Popular Articles, and Updated Articles pages!

Check out [Tools > Customize Text](#) in the [Article Lists Knowledge Base Section](#) to start customizing. We have all the options documented in [Section breakdown: Article Lists](#) too.

For the lists as they appear on the homepage or right column, you may need to make edits to [Homepage](#) or [Settings > Style](#) to see the changes take effect. (This is because we're replacing the old hard-coded text with new merge codes, and want you to have control over that process!) Those changes are very similar to the ones we discussed in our [Using the Customize Text tool to change your article template \(July 5th\)](#) Wisdom Wednesday, so if you're not quite sure where to start, that video should get you up to speed quickly.
