

Add a Required Reading link to Table of Contents

Last Modified on 07/17/2024 10:44 am EDT

Settings > Required Reading currently doesn't have an option to automatically add a link to the Required Reading page into your Table of Contents. If you're interested in this as a feature, please [contact us](#) to request it!

In the meantime, we suggest creating a URL Redirect category to add it to your Table of Contents. To do so:

1. In Articles, [create a new category](#).
2. Add a **Category Title**. If you've kept the default settings, use `Required Reading`. If you've [customized the text](#), match whatever you've entered for the Required Reading page title.
3. Select URL Redirect category for the style of landing page.
4. In the External URL box, add your knowledge base homepage URL and add `/required-reading` to it. So, for example, if I'm setting this up here in our Support KB and I've renamed my Required Reading page to be Mandatory materials, here's what my Add Category pop-up might look like:

A dark blue rectangular box with white text. The text reads: "Sample URL redirect category setup for our renamed Required reading page".

Sample URL redirect category setup for our renamed Required reading page

5. Select **Add and Edit** to open the new category for editing.
6. *Optional:* If you want this link to display in the Table of Contents only (and not on on your knowledge base homepage), in the **Content Restrictions** section, check the box to [Hide from homepage](#).
7. *Optional:* If you want to display the category on your homepage and you're using category icons, be sure you [add a category icon](#)!
8. **Save** and go **Back** to the Articles page.
9. Use the [arrow to drag and drop](#) the new category wherever you'd like it to appear in your table of contents. (We recommend putting it near the top if your table of contents is long!)
