Add a Required Reading article list to your homepage

Last Modified on 02/18/2025 2:05 pm EST

Want to display some of the required articles directly on your homepage? You can do that, too.

We've created an **article list** merge code specifically for this purpose!

> **Reader accounts required**
> The Required Reading feature and list only work with individual reader accounts. Knowledge bases with **Security and access > Security settings > Content authentication** set to public, IP address, or shared password can't use this feature.

How does it work?

To set it up, you'll add the merge code for the list where you'd like the information to be displayed. KnowledgeOwl displays up to 10 of the most recently required articles in the list, and the **See more..** link at the bottom will navigate readers directly to **the Required Reading page** to view a full list of articles they need to acknowledge.

> **Mixed access knowledge bases**
> If your knowledge base allows a mixture of public and private content, the Required Reading Article List will show as empty/blank for anyone who hasn't logged in.

Change number of articles displayed

By default, the 5 most recently required articles will be displayed. You can change this to display between 1-10:

1. Go to **Customize > Website**.

2. Scroll to the **Article list settings** section.

3. Use the **Required reading** dropdown to select the number of articles you'd like the list to display (1-10). If you don't see this dropdown, you haven't **Set up Required Reading**.

4. Be sure to **Save** your changes.

Setup

> ⚠️ **Some assembly required**
> We do not add this list to any section of your knowledge base by default.

If you'd like to add it, you'll add two merge codes somewhere in your knowledge base: into either the **Customize > Homepage** custom content editor or into the **Customize > Style > Custom HTML** of the relevant layouts:

- `[translation("required-reading:required-reading-list-heading")]` **: This merge code grabs the Required Reading list heading in Customize > Default text, making it so no one has to edit the code in the future to update the title.**
- `[template("required-articles")]` **: This merge code generates the required articles list.**

To add the list to your homepage:
- Edit **Customize > Style > Custom HTML** (most common setup)
- Edit **Customize > Homepage** custom content editor (less common)

Refer to the more detailed instructions below for each setup.

Add the Required Articles List to Customize > Style homepage

Newer knowledge bases have their entire homepage set in **Customize > Style (HTML & CSS)**. If your knowledge base uses this layout, follow these instructions to add the Required Articles List there. (If your knowledge base doesn't show any article lists in **Customize > Style (HTML & CSS) > Custom HTML > Homepage**, skip these and follow the next set of instructions!)

1. Go to **Customize > Style (HTML & CSS)**.

2. In the **Customize HTML, CSS, and JS** section, select **Custom HTML**.

3. Select **Homepage** from the **Select HTML section to edit** dropdown.

4. Near the bottom of the code editor, find the `div class="homepage-widgets row"` , **usually on or around row 9:**

```
    <div class="homepage-widgets row">
        <div class="col-md-4 col-sm-6"><h3>[translation("article-lists:popular-articles")]</h3>[template("pop
-articles")]</div>
        <div class="col-md-4 col-sm-6"><h3>[translation("article-lists:new-articles")]</h3>[template("new-art
icles")]</div>
        <div class="col-md-4 col-sm-6"><h3>[translation("article-lists:updated-articles")]</h3>[template("up-
articles")]</div>
    </div>
```

5. **Create a new line where you'd like the Required reading list to go. Copy the code below and paste it onto that new line:**

```
<div class="col-md-4 col-sm-6"><h3>[translation("required-reading:required-reading-list-heading")]</h3>[t
emplate("required-articles")]</div>
```

6. **For example, your code would look like this if you added Required reading as the final list:**

```
    <div class="homepage-widgets row">
        <div class="col-md-4 col-sm-6"><h3>[translation("article-lists:popular-articles")]</h3>
[template("pop-articles")]</div>
        <div class="col-md-4 col-sm-6"><h3>[translation("article-lists:new-articles")]</h3>[template("new-art
icles")]</div>
        <div class="col-md-4 col-sm-6"><h3>[translation("article-lists:updated-articles")]</h3>[template("up-
articles")]</div>
        <div class="col-md-4 col-sm-6"><h3>[translation("required-reading:required-reading-list-heading")]
</h3>[template("required-articles")]</div>
    </div>
```

7. **This will add the Required Reading list on a separate row from the other three lists. If you'd like them all on one row, adjust all four divs to have** `col-md-3` **instead of** `col-md-4` **.**

8. **Be sure to Save your changes once you're done!**

Add the Required Articles List to Customize > Homepage

If your article lists aren't in Customize > Style > Homepage:

1. **Go to Customize > Homepage.**

2. **Copy one of the other homepage lists and paste it in again.**

3. **Replace the title merge code with:**

```
[translation("required-reading:required-reading-list-heading")]
```

4. **Replace the list merge code with:**

```
[template("required-articles")]
```

5. **Save.**

Your homepage might now look like this:

Sample Homepage editor layout with Required Articles list adde
