

☒ New feature drop: Inactive version PDF exports!

Last Modified on 06/22/2026 5:11 pm EDT

You asked for it, and thanks to the interest of one of our customers in [sponsoring this feature](#), we now have it: the ability to generate a PDF export of an inactive version!

You'll see this new option in the warning message displayed at the top of an inactive version in the editor:

The screenshot shows the KnowledgeOwl editor interface. At the top, there's a navigation bar with 'KnowledgeOwl Support', 'Knowledge Base', 'Tools', 'Library', 'Settings', 'Reporting' (with a '161' badge), and 'View KB'. On the left, there's a sidebar with 'Articles', 'Manage', and 'Home Page'. The main content area has a yellow warning message: 'Until published, changes you make to this version will only alter this version and will not appear publicly. Visibility, call outs, etc. are locked to the current article version and cannot be changed from this version.' Below the warning, there's a blue link 'Generate version PDF' with a PDF icon, which is highlighted by a black arrow. At the bottom of the warning area, there are links for 'In progress', 'Old Links', 'Copy Link', and 'View Article'. Below the screenshot, a dark blue banner contains the text 'Sample Generate version PDF link in inactive version'.

Once you generate a version PDF, that link will update to prompt you to download the new PDF:

This screenshot is similar to the previous one, showing the same warning message. However, the link now says 'Download version PDF' with a PDF icon, highlighted by a black arrow. The 'Old Links', 'Copy Link', and 'View Article' links are still present at the bottom of the warning area. Below the screenshot, a dark blue banner contains the text 'Sample Download version PDF link at top of page'.

And you'll also see a PDF icon in the versions list in the editor that you can click to download the PDF, too:

The screenshot shows a 'Versions' list in the editor. At the top, it says 'Active Version: 3.00'. Below that, it says 'All Versions:'. The list includes several versions: 'a456.1' (with a red 'x' and a PDF icon, highlighted by a black arrow), 'a123' (with a red 'x' and a PDF icon), '3.01' (with a red 'x' and a 'READY' button), '3.00' (with a green 'PUBLISHED' button and a blue 'VIEWING' button), and '2.01' (with a red 'x' and a PDF icon). At the bottom of the list, there's a link 'See More...'. Below the screenshot, a dark blue banner contains the text 'Sample download version PDF icon'.

Once generated, a version PDF will be available for 24 hours provided you don't save any further changes to the version. If you do save changes to the version, we'll invalidate the PDF and prompt you to generate a new one.

Some fun changes with this feature:

- We're now capturing a lot more detailed information about versions, including:
 - The author who created them
 - The date they were created
 - The date they were activated (if applicable)
 - The name of the author who activated the version
 - The date they were deactivated (if applicable)
 - The name of the author who deactivated the version (by activating a different one)
 - Most of these new fields will only be populated moving forward, as we don't have a way to generate historical data since we didn't previously track a lot of these, though the date created should be populated for most existing versions!
- Version PDFs will use whatever header or footer you've set up in **Settings > PDFs**, but since they can contain very different metadata from a standard article, we've added a new Custom HTML template to **Settings > Style: Article Version!** Right now, this template is only used for the version PDF generator, but it gives you control over the format and layout of these PDFs. Here's a sample of what the metadata section looks like out of the box, with some sample data in it:

Published article with versions

Version Number a456.1
Version Author Kate Sassypants
Version Creation Date 10/10/2023 12:32 pm EDT
Version Activation Date 10/10/2023 1:01 pm EDT
Author Activating First 1st Dummy
Version Deactivation Date 10/10/2023 1:02 pm EDT
Author Deactivating First 1st Dummy

Lorem ipsum dolor sit amet, duo utamur copiosae torquatos ad, sale virtute vituperata ne cum, id quo aliquando adolescens argumentum. Eum nemore sadipscing eu, gloriatur deterruisset ei sea, denique definitiones mei ne. Mel ea erat aperiam, falli interpretaris ut eum. Audire mediocritatem vix no. Sed exerci habemus no, minimum expetenda ut quo.

Sample top portion of a version PDF, with all new metadata fields populated

- All of the text strings used in that sample layout are fully incorporated into the [Customize Text tool's Article section](#), so you can change the labels' wording even if you don't change the layout or format!

And one change that is less fun:

Previously, if you had made a version visible to groups and you viewed that version in the live knowledge base, you could download a PDF of the version from that view. That PDF download was always a bit odd, since it contained the body of the version but the metadata of the current active version.

We've completely removed that PDF download option in the live knowledge base when viewing versions made visible to groups.

You won't see the PDF icon next to the article title when viewing a version in this way--you'll have to generate the

version PDF using the article options. We hope you'll forgive us for this!

Long-term, we're hoping to bring that back and have it work similarly to the version PDFs generated from the editor, but for now we wanted to be sure that all version PDFs would be formatted in the same way.
