

☒ Nat'l Beer Can Appreciation Day bugfixes

Last Modified on 01/23/2025 5:54 pm EST

I'll admit, beer cans are a somewhat strange thing to celebrate—but the more I think about them, the more I like them!

- Their light weight makes shipping them more [fuel-efficient](#) than shipping glass bottles
- They've served as a new way for visual artists to [share their work](#)
- And with so many fantastic [0% alcohol beer options](#) out there, they can be enjoyed at any time!

Now, let's crack open some recent bugfixes:

1. When temporary access links were used in a [secure file library](#), images weren't appearing in [PDFs](#). This issue has been resolved.
 2. In Customize > [Website](#) > Top navigation, the option to add or remove a knowledge base [login link](#) wasn't saving changes. You can now successfully add or remove the login link from your knowledge base's top navigation.
 3. Images now maintain consistent alignment and styling whether they're added through the File Library or uploaded directly in the Article Editor. We know this inconsistency was frustrating for those who encountered it, and we're happy to have resolved it!
