

Accessibility auditing tools

Last Modified on 06/12/2025 4:28 pm EDT

These tools can help you audit and assess your knowledge base's accessibility:

- **Sally & Editorially: Straightforward content accessibility at scale:** Compares two tools for promoting and checking accessibility within content management systems
 - **Sally Accessibility Quality Assurance Assistant:** One of the two tools discussed in the talk, available for Joomla, WordPress, or as a bookmarklet in your browser
 - **Editorially Accessibility Checker:** The second tool, available for Drupal, WordPress, and Squarespace
- **WAVE Web Accessibility Evaluation Tools:** The WAVE browser extension is Kenzie's go-to tool for a first pass on accessibility questions. It gives a lot of complex info, which can be overwhelming, but:
 - If you're seeing a lot of actual errors and contrast errors, you don't have to understand all of those errors to know that there's likely a problem, and knowing there's a problem is the first step 😊.
 - The "Structure" tool quickly shows you a list of the headings on the page and makes it easy to spot skipped levels, etc.
- **axe Devtools:** Some of our team used the browser extension of this tool when it was in a free beta to test some of our own accessibility. We haven't used it since it went paid, but we found it very useful at the time!

Thanks to our contributor

Kenzie Woodbridge shared most of these tool suggestions during **Season 3, Episode 6 of The Not-Boring Tech Writer** podcast.

Have a tool you've used that we should add? Leave a comment below and let us know!
