Owl Intelligence feature overview

Last modified on 09/25/2026 6:24 pm EDT

Owl Intelligence brings the power of AI to your knowledge base. Start by using AI tools to draft articles and generate meta descriptions, perfect for speeding up content creation and building templates. More features are on the way to help you work smarter and create even better experiences for your readers.

How it works

KnowledgeOwl uses AWS Bedrock to securely process any information used for AI generated content. Data is accessed only when you use an Owl Intelligence feature that requires it, and the AI models never store it or use it for training.

Owl Intelligence is available on all plans and uses a simple credit system. Each plan includes a set number of credits per month, which reset at the beginning of each month. Credits do not roll over. To keep things easy, each AI action uses just 1 credit.

If you run out, you can upgrade to a higher plan or contact us to request a few extra credits

For more detailed questions about the security and safeguards we use, refer to AI security and privacy at KnowledgeOwl.

How Owl Intelligence can help you

Use Owl Intelligence to help you with article content generation in two ways:

1. To create an article.
2. To generate a meta description for your article.

Refer to Use Owl Intelligence to generate content for more information.

Get started

Ready to get going? Existing accounts will need to Set up Owl Intelligence first and then you can get started!
