

Linus Assist feature overview

Last Modified on 07/08/2025 5:27 pm EDT

Feature availability

This feature is currently available to new accounts only while we test it and gather feedback. If you're interested in trying it out, [contact us](#).

Defy writer's block. Use Linus Assist to generate article content or meta descriptions for quick content creation. This can be a great way to generate dummy or demo content to test formatting and styles, generate [templates](#) for articles, and more!

Linus Assist uses [OpenAI](#) to generate article content based on your article's title. Only the information you share for the article is sent to OpenAI; no other content or information from your knowledge base is.

Generate up to 20 articles in your account for free without fussing directly with OpenAI. If you'd like to keep using the service after that, [sign up](#) for an OpenAI account and [enter your own OpenAI API key](#) to continue using it.

How Linus Assist can help you

Use Linus Assist to help you with article content generation in two ways:

1. To [create an article](#).
2. To generate a meta description for your article.

Refer to [Use Linus Assist to generate content](#) for more information.

Get started

Ready to get going? You'll need to [Enable Linus Assist](#) first (which may mean a quick email to our support team), and then you can get started!
