Segmented visits log

Last Modified on 12/04/2025 4:41 pm EST

The **Segmented visits** log is basically a filtered version of the **Logs report**, showing only the logs for visits that included the page you open it from. Use it to review other things visitors to this page did in the same session beyond the **Transitions report**.

It's a drilldown report available from these **Behavior** reports:

- **Pageviews**
- **Entry pages**
- **Exit pages**
- **Page titles**
- **Downloads report**
- **Searches report**

> **I don't see this log**
> The Segmented visits log is only available if you don't **Turn off visits log & visitor profiles** in **KB settings > Owl Analytics**.

How to view the log

To open the Segmented visits log:

1. Go to **Reporting > Owl Analytics**.

2. Select one of the Behaviors reports from the **Choose your report > Type** dropdown.

3. Select the time **Period** you want the report to display.

4. Locate the page entry you want to view segmented visits for and hover over it.

5. Select the **Open segmented visits log** icon, which looks like a person in a box. The Segmented visits log opens in a modal over the main report.

Anatomy of the log

The segmented visits log functions and displays the same as the Logs report. Refer to the **Logs report** documentation for more information on using this report.
