

Create new Export API tokens

Last Modified on 03/18/2026 4:19 pm EDT

Authors with the default Editor role can update Owl Analytics settings, including creating and deleting Export API tokens. If you're using a [custom role](#), you'll need to have the KB Settings [custom author role permission to Update analytics settings](#).

You can generate multiple Owl Analytics Export API tokens. This can be useful if:

- Your existing API token has been compromised
- You want to export Owl Analytics data to different tools or data repositories

Refer to our [Export API token best practices](#) for more guidance on when to create new tokens.

To create a new Export API token:

1. Go to **KB settings > Owl Analytics**. The Owl Analytics settings page opens.
2. In **Export API** in the **Quick start** section, select **Generate new API token**:

A screenshot of a dark blue button with white text that reads "Select Generate new API token". The button is centered within a light gray rounded rectangular frame.

3. The page updates to display your new API token. Copy this token and use it in the Export API calls you wish.
