

Turn off ratings for specific articles

Last Modified on 04/07/2026 12:19 pm EDT

Your KnowledgeOwl knowledge base comes with [ratings](#) turned on across the knowledge base. New articles will automatically have ratings turned on so your readers can rate your articles with thumbs up/down or five stars.

You can disable ratings for certain articles. This action removes the ratings section from the article completely. To do so:

1. Open the article for editing.
2. In the **Display Settings** section, check the box to **Remove feedback ability**.

Check the box to Remove comment
ability

3. Be sure to **Save** your article changes.

The ratings section won't be shown in this live article. Refer to [Display Settings](#) for more information about the other settings in this section.

If you'd prefer to disable ratings completely across your entire knowledge base, refer to the instructions in [Turn off comments in your knowledge base](#).
