

Recommend an article or category in contextual help

Last Modified on 04/07/2026 1:55 pm EDT

Once you understand [How to format your recommended page paths](#), you can begin adding page paths to populate your contextual help widget's Recommended tab.

To set up an article or category as being recommended:

1. Open the content for editing.
2. Find the **Recommend on Pages** section in the righthand column.
3. Select **Add page** to begin adding a new page.

The **Adding new page** section displays.

4. Add your page path into the text field with the `/app/documentation` placeholder:

Recommend On Pages

Adding new page:

[Cancel](#)

The Adding new page field will appear

5. Once you've finished adding your page path, select **Save** directly under it.

Recommend On Pages

Adding new page:

[Cancel](#)

Add your page path into the text box and click the **Save** button directly under it

6. The editor updates to show the page path you added:

Recommend On Pages

/pricing

The page path now appears in the section with a trashcan icon to the right

7. Repeat this process for any other pages you want to recommend this article on.

8. Be sure to **Save** your article once you're done adding paths.
