

Update an existing recommended page

Last Modified on 04/16/2026 2:27 pm EDT

Once you start using the contextual help widget to recommend articles, you'll likely need to update or delete page paths as your website or application changes. In this article, we cover the steps you need to follow to edit or update existing page paths. Refer to [Remove an existing recommended page path](#) for the steps to completely remove an old page path.

The information below varies based on whether you're using our 2026 new editor or old editor.

To figure out which instructions to follow:

1. Open any article for editing.
2. If the lefthand navigation is collapsed and the editor otherwise has a totally white background, follow the **New editor** documentation.
3. If the lefthand navigation is expanded and the top of the editor and the righthand column have a grey background, follow the **Old editor** documentation.

Here are side-by-side examples of the new editor and the old editor:

Try out the new editor

We'd love your feedback on the new editor. To switch to the new editor, open any article for editing and select the **Switch to new editor** link at the top of the editor.

Update contextual help page path in new article editor

To update a Contextual help widget recommend article on path in the new article editor:

1. Open the article for editing.
2. In the **Other** section, select anywhere in the text next to **Contextual help widget**:

Select anywhere in the text next to **Contextual help widget**

The **Recommend articles on these pages** modal opens.

3. Select anywhere in the text box for the page path you wish to edit:

Select anywhere in the text box for the page path you wish to edit

4. Make your edits. All edits are instantly displayed.
5. Repeat for any other page paths you wish to edit.
6. Select anywhere else on the page to close the modal.
7. Be sure to **Save** your changes.
