

# Remove an existing recommended page path

Last Modified on 04/16/2026 2:28 pm EDT

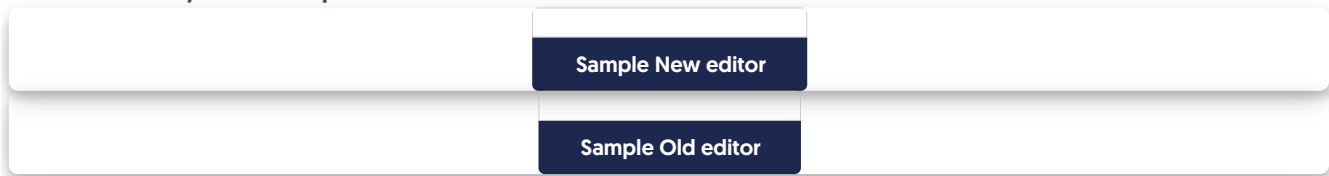

Once you start using the contextual help widget to recommend articles, you'll likely need to update or delete page paths as your website or application changes. In this article, we cover the steps to remove an existing page path. Refer to [Update an existing recommended page](#) for the steps to edit a page path.

The information below varies based on whether you're using our 2026 new editor or old editor.

To figure out which instructions to follow:

1. Open any article for editing.
2. If the lefthand navigation is collapsed and the editor otherwise has a totally white background, follow the **New editor** documentation.
3. If the lefthand navigation is expanded and the top of the editor and the righthand column have a grey background, follow the **Old editor** documentation.

Here are side-by-side examples of the new editor and the old editor:

## Try out the new editor

We'd love your feedback on the new editor. To switch to the new editor, open any article for editing and select the **Switch to new editor** link at the top of the editor.

## Remove contextual help page path in new article editor

To completely remove a Contextual help widget recommend article on path in the new article editor:

1. Open the article for editing.

2. In the **Other** section, select anywhere in the text next to **Contextual help widget**:

Select anywhere in the text next to **Contextual help widget**

The **Recommend articles on these pages** modal opens.

3. Select the trashcan icon next to the page path you wish to remove:

Select the trash can icon next to the page path you wish to remove

4. Repeat for any other page paths you wish to remove.

5. Select anywhere else on the page to close the modal.

6. Be sure to **Save** your changes.
