

Change the order of the Recommended tab

Last Modified on 04/07/2026 2:04 pm EDT

If you've added several recommended articles for a given page path in your website or application, you may want to set the order they display in.

To change the order of recommended articles and categories for a given page path, go to **Reporting > Widget** and edit the Recommended Article Weights for that page path. Refer to [Recommended Article Weights](#) for more detailed instructions.
