

# What is and isn't shared between synced articles

Last Modified on 05/26/2026 4:47 pm EDT

When you set up synced articles in the same knowledge base, parent and child articles will share and automatically sync:

- Article body content
- Versions + version notes (once [child is published](#))
- Revision history (only visible on the parent)

## What isn't shared?

For parent and child articles in the same knowledge base, the parent and child articles won't share or automatically sync:

- Permalink
- Title
- Internal Article title
- Internal Note
- Tags
- Search phrases
- Title tag
- Meta description
- Publishing Status
- Author
- Internal flags (Template, Topic)
- URL redirect setting & URL (the checkbox as well as the URL to redirect to must be managed independently)
- Reader group restrictions
- Author team restrictions
- Article call outs
- Other restrictions (exclude from search results, etc.)
- Related articles
- Recommend on pages

## Articles within synced categories

Articles synced as part of [Synced categories](#) sync a lot more information. Refer to [Sync behavior in shared content categories](#) for more information.
